5. The calendar should now appear in your list of calendars under **Other Calendars**. It will not show events on your calendar and must be selected from the list to view events. You can drag to copy events to your calendar but they may not automatically update.

When you start Outlook, it checks Google Calendar for updates and downloads any changes. If you keep Outlook open, it also periodically checks for and downloads updates. (Google Calendar tells Outlook how often to check for updates.)

**Outlook for MAC (OS Big Sur)**
Outlook for Mac currently does not support *adding* an Internet calendar, however, there is a workaround to have one show up. Please note, the displayed image may not reflect the settings in your organization's outlook for web:

1. Login into the web version of outlook: https://outlook.office365.us/
2. Select the app launcher (the 9 dot grid) at the top left, then click calendar. This icon may also be in a left menu beneath the 9 dot grid depending on your organization

3. Select add calendar
4. Select subscribe from web
5. Paste the preferred calendar URL into the box
